

What is stored, and where

SQLite stores reusable questions and operational reports. Learner answers stay in session memory.

SQLITE: data/practice/practice.sqlite3

questions

id: TEXT PRIMARY KEY
fingerprint / topic / difficulty / format
corpus_hash / policy / created_at
payload: complete PracticeQuestion JSON
UNIQUE(fingerprint, corpus_hash, policy)
Accepted MCQ, summary, A-D notes, quotes and evidence

runs

id: TEXT PRIMARY KEY
created_at: TEXT / payload: JSON text
Request, accepted/reused counts and error class
Stages, calls, tokens and elapsed seconds
Retrieval rankings and checked evidence packets
question_records: slot, origin and question_id

Application reference: question_records[].question_id

OUTSIDE THE PRACTICE DATABASE

Streamlit server session

Active set and learner choices
Python score and latest 20 completed sets
No learner choices sent to the model
Browser refresh/restart can lose history

Frozen datasets and evaluation JSON

data/benchmarks: questions, keys and source metadata
data/evaluation: predictions, errors and metrics
Gold keys are grading inputs only
Separate task reports read by Evaluation Studio

No learner table or SQL foreign key between questions and runs. Question references are inside JSON payloads.
Source and policy govern reuse. Content hashes detect accidental edits, not malicious tampering.
